

Liberty Waste Management has a very thorough checklist for servicing our Liberty Elite Portable Restrooms. Our attention to detail along with our quality of equipment and service is what sets us apart from others in the business.

Required Service Checklist for Liberty Restrooms:

While driving to site please follow all road signs, speed limit requirements, and watch out for all pedestrians, bicyclist, and other motorists.

Waive and smile at all personnel working and or located around the site. If they are close to our service area let them know you are going to be servicing the units and sometimes our truck may give off an unpleasant odor.

Prior to starting the pump, inspect the inside of the unit and the inside of the tank for any foreign items needing to be removed. After inspection, start the pump to vacate the contents of the tank along with loose paper on the floor and in the urinal.

Wash down with onboard fresh water inside and outside of unit. Use urinal brush to completely clean inside of urinal. Use floor brush and squeegee to completely clean floor of any debris. After thorough cleaning, wipe down with a clean rag inside of unit.

Fill 5 gallon bucket with fresh water and add blue earth friendly deodorizer. Add 3-4 ounces of deodorizer during the winter months and 5-6 ounces during the summer months. During the winter months add one 16 ounce cup of Magnesium Chloride/ Salt mixture to prevent freezing of the contents.

Check and refill all premium paper products. Make sure all paper rolls are started and the paper is not thrown back into the tank. Serviced units must look brand new and freshly serviced. Toss in new urinal block and refill hand sanitizer if needed. Sign and date service sticker.

Smile and waive at nearby clients and workers. Back up slowly in event cars parked behind you during servicing. Move on to next service site. Have a great day!
